

JET PRESS MANUFACTURING

Metal Stamping &
Forming Facility

Established in 1977, JET PRESS is a leading supplier of fasteners, industrial components and bespoke solutions.

In 2004, the company expanded its manufacturing capabilities by acquiring DD&A Tools, a former toolmaker for TRW.

The JET PRESS metals factory based in Aylesbury Buckinghamshire, still manufactures products for which the original design can be traced back to the 1940s.

Over the years, JET PRESS has manufactured hundreds of different types of parts in high volumes.

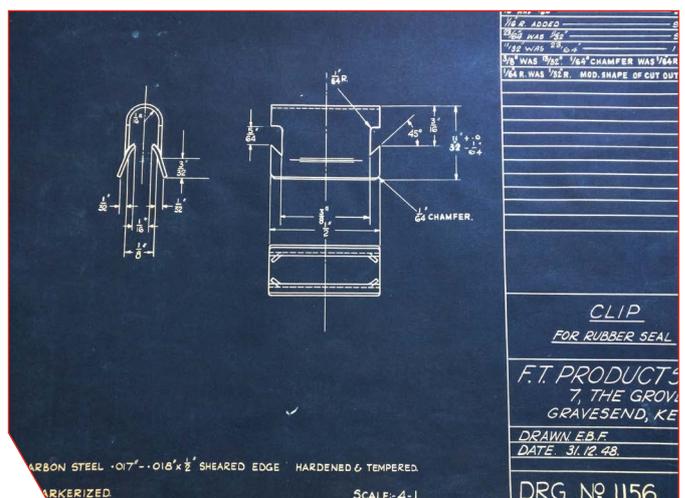

The facility is able to form variations of flat metal strip into a wide variety of shapes and sizes required for an extensive range of fasteners and engineered components, from simple clips to highly engineered bespoke developments.

Everything from hose bands for modern turbochargers for the automotive industry, to edge and cable clips for hundreds of different automotive pipe and panel fastening applications.

With capacity to manufacture in strip widths from 6mm to 40mm and in thicknesses of 0.25mm to 0.8mm carbon steel, we can manufacture a wide variety of sizes from small retaining clips to large capacity three-way clips.

Our range of machine tools at the site includes 14 high-capacity, multi-slide forming machines. Currently the company holds 500 tools with 200 of these in current or regular use.

Through our highly-experienced and skilled workforce, we are able to manufacture and maintain strict tolerance levels and also adapt the existing tooling to suit specific customer requirements.

The rubber seal clip dates back to 1948 and is still manufactured today. It was designed by Kent based company FT Products, which was acquired by TRW in the 1970s.

JET PRESS has a distinguished history of applying its manufacturing capabilities to develop and supply high-quality components to some of the most renowned manufacturing companies globally.

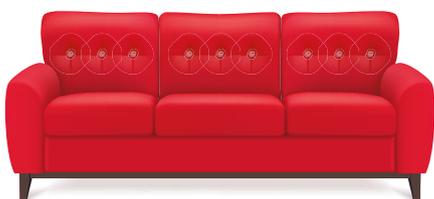

Parts supplied for the original 1960's iconic Mini. When the brand was reintroduced by BMW in 2002, JET PRESS developed self-threading nuts for securing the front grille.

Securing clips for satellite systems.

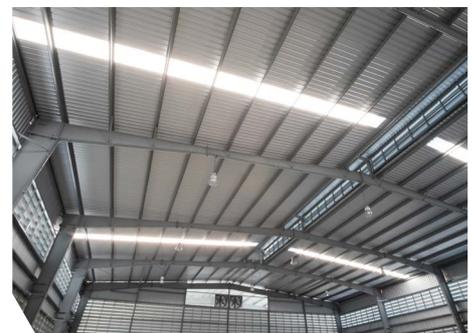

Manufacturing parts for the existing models of BMW, which have evolved from parts first supplied for turbochargers in 1960.

Pronged springs for furniture fascia securing.

Supplying high-quality, cost-effective parts to the global domestic appliance industry across numerous applications.

Purlin clips, cable clips and mounting brackets supplied for construction.

Through our global supply chain, in-house engineering, manufacturing and development expertise, we help lower the risk, cost and complexity of our customers' supply chains.

QUALITY ASSURED

We meet a wide range of quality standards for industry and will support you with all the documentation you require to demonstrate quality compliance.

- ISO9001:2015
- ISO14001:2015
- ISO45001:2018
- Production Part Approval Process (PPAP)
- Initial Sample Inspection Reports (ISIR)
- Failure Mode and Effect Analysis (FMEA)
- International Automotive Task Force (IATF) - in progress
